

Dividing integers

Grade 5 Integers Worksheet

Rule:

The quotient of two numbers with same signs is a positive number.

The quotient of two numbers with different signs is a negative number.

Find the quotients.

1) $-18 \div 2 =$

11) $-210 \div 6 =$

2) $-72 \div 12 =$

12) $-144 \div 12 =$

3) $-220 \div 20 =$

13) $92 \div 2 =$

4) $120 \div (-20) =$

14) $190 \div (-10) =$

5) $-45 \div (-15) =$

15) $133 \div 19 =$

6) $-96 \div 16 =$

16) $42 \div (-3) =$

7) $-180 \div (-9) =$

17) $171 \div 1 =$

8) $112 \div 7 =$

18) $112 \div (-16) =$

9) $209 \div (-19) =$

19) $-36 \div 6 =$

10) $-72 \div (-6) =$

20) $84 \div (-7) =$

Dividing integers

Grade 5 Integers Worksheet

Rule:

The quotient of two numbers with same signs is a positive number.

The quotient of two numbers with different signs is a negative number.

Answers:

1) $-18 \div 2 = -9$

11) $-210 \div 6 = -35$

2) $-72 \div 12 = -6$

12) $-144 \div 12 = -12$

3) $-220 \div 20 = -11$

13) $92 \div 2 = 46$

4) $120 \div (-20) = -6$

14) $190 \div (-10) = -19$

5) $-45 \div (-15) = 3$

15) $133 \div 19 = 7$

6) $-96 \div 16 = -6$

16) $42 \div (-3) = -14$

7) $-180 \div (-9) = 20$

17) $171 \div 1 = 171$

8) $112 \div 7 = 16$

18) $112 \div (-16) = -7$

9) $209 \div (-19) = -11$

19) $-36 \div 6 = -6$

10) $-72 \div (-6) = 12$

20) $84 \div (-7) = -12$
