Grade 4 Writing Worksheet

Edit the paragraph using these symbols:

Editing Key	
 Make lowercase	 Remove word
 Capitalize	 Add punctuation
 Insert word	 Spelling mistake
 Indent paragraph	 Change order of words or letters

Kangaroos and Snakes may seem very different, but they actually share some similarities. First, both kangaroos and Snakes are vertebrates, which means they have both a backbone. (It doesn't seem like snakes have one, does it?) Having a backbone helps them move and support their bodies. Second both animals have adapted to their Environments in unique ways. Kangaroos have adapted to have strong hind legs and a long tale that helps them hop and balance. Snakes have adapted to have a flexible body and no legs, which allows to them slither and move through tight spaces. these are some important similarities! Despite the similarities, there are also many differences between kangaroos and Snakes. First

kangaroos are mammals, which means they nurse their babies with milke. Snakes, however, are are reptiles and do not produce milk.

second, kangaroos are social animals and live in groups called mobs. Snakes, on the othor hand, are usually solitary creatures. They come to together mate and hibernate but otherwise enjoy living alone These are some key differences between kangaroos and Snakes.
